

Project Profile:

Putting the comfort back in Comfort Inn

To accommodate building codes, Comfort Inn & Suites in Plattsburgh, N.Y., — a popular tourist destination near Lake Champlain — had to enlarge the windows to allow a 20 percent ratio of room size to natural lighting. They also wanted to go green and lower their energy costs by using Deceuninck Revolution® Tilt-and-Turn and Standard Windows.

The windows were chosen over a competitor with an inexpensive vinyl product, because their product could not accommodate the required square footage to meet local and city codes.

In the spring and summer of 2014, The Wood 'N Glass Shop of Whitesboro, N.Y. began installing the new windows, as the Comfort Inn & Suites underwent a complete renovation.

The Results

The project called for the installation of 110 separate window units throughout the hotel.

The Wood 'N Glass Shop used Revolution and Standard Windows to bring the Comfort Inn up to code and exceed the energy-savings and thermal ventilation capabilities offered by their previous windows.

The Revolution window has the material science and craftsmanship to meet the square-footage requirements of the new windows without losing structural integrity.

Project-at-a-glance
